Research Objective

My research interests involve efficient machine learning strategies for low resource problems where limited training data is available, including few-shot keyword-spotting, object detection, and resilient visual navigation.

Education

- **Harvard University**, Cambridge, MA. *PhD Candidate in Electrical Engineering.* Fall 2020-Present
  Advisor: Professor Vijay Janapa Reddi, Edge Computing Lab [link] GPA: 4.0
- **Harvard University**, Cambridge, MA. *Bachelor of Arts in Computer Science.* 2009

Work Experience

Apple, Seattle WA Summer 2022
AI/ML Intern, *Machine Intelligence Sensing Technologies*
Researching novel learning strategies for improving accuracy on multimodal time-series data.

Landing AI, Palo Alto CA Summer 2021
Intern, *Continuous Learning Team*
Developed and prototyped novel anomaly detection methods for visual inspection.
- Collaborated cross-functionally to distill high-level customer needs into concrete engineering requirements
- Leveraged data-centric ML and error analysis to systematically innovate and improve model
- Kick-started integration and deployment of anomaly detection models into customer-facing product features

MIT Lincoln Laboratory, Lexington MA 2012-2020
Associate Staff, *Group 104: Artificial Intelligence Software Architecture and Algorithms.*
- Served as co-PI on two autonomous navigation research efforts:
  - *Transferring Multi-Robot Learning through Virtual and Augmented Reality for Rapid Disaster Response*. Deploying Sim2Real visual navigation reinforcement learning policies without domain randomization.
  - *Resilient Perception in Degraded Environments*. Multi-agent mapping utilizing outlier-robust pose graph optimization and the physics of wireless signals for efficient coordination.
- Prior engineering roles include SmallSat flight software development, test and evaluation engineering for a DARPA program, and high-scale network traffic generation.

Languages: Python, Haskell, C++, C, Scala, JavaScript, Java. **Technologies:** TensorFlow, PyTorch, Pandas, Scikit-Learn, GTSAM, AWS, Docker, Flask, ZeroMQ.
